

Scenario ID : 1

valid Login

Test Steps:

1. Open pyCharm app
2. Open PyCharm project
3. Open [script.py](#)
4. Install Selenium - Python- m pip install selenium
5. Import Selenium code
6. Open Chrome - <https://the-internet.herokuapp.com/login>
7. Navigate to form Authentication
8. Enter username & password
Username:Standard_user
Password:Wrong_123
9. Click login and verify successful login
10. Verify the success message
11. Click logout
12. Run the complete python automation

Screenshots:

The screenshot shows the PyCharm IDE with a project named 'WelcomeScreen'. The file explorer on the left shows the project structure. The main editor displays a Python script named 'script1.py' which uses Selenium WebDriver to automate a login process. The script includes comments for each step: opening Chrome, navigating to the demo login website, maximizing the browser, entering the username 'tomsmith', entering the password 'SuperSecretPassword!', clicking the login button, waiting for 3 seconds, checking the result, and finally closing the browser.

```
1 from selenium import webdriver
2 from selenium.webdriver.common.by import By
3 import time
4
5 # Open Chrome
6 driver = webdriver.Chrome()
7
8 # Demo login website
9 driver.get("https://the-internet.herokuapp.com/login")
10
11 # Maximize browser
12 driver.maximize_window()
13
14 # Enter Username
15 driver.find_element(By.ID, value="username").send_keys("tomsmith")
16
17 # Enter Password
18 driver.find_element(By.ID, value="password").send_keys("SuperSecretPassword!")
19
20 # Click Login button
21 driver.find_element(By.CSS_SELECTOR, value="button[type='submit']").click()
22
23 # Wait
24 time.sleep(3)
25
26 # Check result
27 message = driver.find_element(By.ID, value="flash").text
28 print("Result:", message)
29
30 # Close browser
31 driver.quit()
```

The status bar at the bottom indicates the file encoding is UTF-8, 4 spaces indentation, and the Python interpreter is set to 'venv [3.14.5]'.

This screenshot shows the same PyCharm IDE after the script has been executed. The 'Run' tool window at the bottom displays the output of the script. The command executed was 'C:\Users\Ladu\PycharmProjects\WelcomeScreen\.venv\Scripts\python.exe C:\Users\Ladu\PycharmProjects\WelcomeScreen\script1.py'. The output shows 'Result: You logged into a secure area!' and 'Process finished with exit code 0'. The script editor is still visible in the background, showing the same code as the first screenshot.

```
Run script1 x
C:\Users\Ladu\PycharmProjects\WelcomeScreen\.venv\Scripts\python.exe C:\Users\Ladu\PycharmProjects\WelcomeScreen\script1.py
Result: You logged into a secure area!
Process finished with exit code 0
```

Invalid Password

Test Steps:

1. Open pyCharm app
2. Open PyCharm project
3. Open [script.py](#)
4. Install Selenium - Python- m pip install selenium
5. Import Selenium code
6. Open Chrome - <https://the-internet.herokuapp.com/login>
7. Navigate to form Authentication
8. Enter username & Invalid password
Username:Standard_user
Password:wrong123
9. Click login and verify successful login
10. Verify the success message
11. Click logout
12. Run the complete python automation

Screenshots:
